

ABSTRACT OF THE DISCLOSURE

A surfing exerciser includes a base on the floor and a motor is disposed on the base with a wheel connected to an end of the motor and driven by the motor. A frame is disposed on the base and an arm has a first end pivotably connected to the frame. A second end of the arm is pivotally connected to a first end of a link, and a second end of the link is eccentrically pivotably connected to the wheel. A board is pivotably connected to the link so that a user stands on the board and the board is moved along a ∞ -shaped path when the motor is activated.
